

*"Sciamus was engaged by Aero2 to design, develop and support a system to manage the roll out of our mobile base stations across Poland. For key operational reasons, Aero2 required this system to be in place in extremely challenging time scales. Whilst understanding the need to deliver a solution very quickly, Sciamus proposed a design, involving complex integration between TIBCO iProcess, Conductor, BusinessWorks, GI and Analytics, that would be robust and flexible enough to meet Aero2's long-term business objectives. The result was a project that was delivered to time, cost and quality. Throughout the project Sciamus clearly demonstrated their in-depth knowledge of the TIBCO product set and of the Telco domain, as well as an absolute commitment to meet our business objectives. I would be happy to recommend Sciamus to any other company that is looking for the highest level of TIBCO expertise."*

Adam Kurianski, CEO, Aero2
